

FIREWORKS JAR

Create your own miniature fireworks show

WHAT YOU NEED

- Large Jar
- Small Dish or Bowl
- Water and Vegetable Oil
- Measuring Spoons
- Food Coloring
- Fork

HOW TO DO IT-STEP BY STEP

- 1) Fill your jar 3/4 of the way with warm water.
- 2) In your bowl, add 3-4 tablespoons of vegetable oil.
- 3) Add a few drops of food coloring to the oil. Take your fork and mix it together.
- 4) Take your fireworks mixture and gently pour it into your jar.
- 5) Observe what happens. Since the oil is less dense than water, it will float on top. The food coloring will sink into the water and begin to dissolve. Try to make cool patterns or shapes!
